

ASSIGNMENT 2.3

Q1. List 5 common issues users face with USB keyboards or mice on laptops, and write one possible solution for each.

ISSUE NO 1. Keyboard Or Mouse is not detected

Solution -- Unplug and reconnect USB drive, or try another USB drive Port.

ISSUE NO 2. Keyboard / Mouse stops working randomly

Solution – Restart the laptop and check / update the USB drives.

ISSUE NO 3. Mouse cursor moves slowly or freezes.

Solution—Clean the mouse sensor and try it on a proper surface.

ISSUE NO 4. Some keyboard keys do not work

Solution-- Check for dust in keys / damaged keys.

ISSUE NO 5. USB device disconnects frequently

Solution—Check the USB cable / connector for damage and try different USB port.

Q2. Simulate a troubleshooting flow: Your Bluetooth headphones are not connecting to your phone. Write the exact step-by-step actions you would take to diagnose and fix the issue, mentioning any settings or indicators you would check.

➤ **Bluetooth Headphones Troubleshooting**

1. **Check battery** – Charge and turn on headphones.
2. **Turn ON Bluetooth** – Go to **Settings → Bluetooth**.
3. **Enable pairing mode** – Hold the Bluetooth/power button until the light flashes.
4. **Connect** – Select headphones from **Available Devices**.
5. **If not connecting** – **Forget/Unpair** the device and pair again.
6. **Check other devices** – Disconnect headphones from another phone/laptop.
7. **Restart** – Restart both phone and headphones.
8. **Still not working** – Update phone software or **reset mobile network it including WIFI and Bluetooth**.

Q3. A user reports that their external webcam is not detected during a Zoom call on Windows 10. Write a checklist of 6 things to check or try to resolve the problem. Hint: Consider device manager, privacy settings, and app permissions.

1. **Re-plug the USB Cable**--Unplug your webcam and plug it into a different USB port. Make sure the lens cover or privacy slider on the camera is open.
2. **Turn On Camera Privacy Settings**--Go to **Settings > Privacy > Camera**. Make sure the top switch for camera access is turned On.
3. **Allow Zoom Access**-- In that same Camera settings menu, scroll down and make sure "Allow desktop apps to access your camera" is switched On.
4. **Check Device Manager**--Right-click the Start menu and pick Device Manager. Click on Cameras. If your webcam shows a down arrow, right-click it and choose Enable device.
5. **Select the Right Camera in Zoom** --- Open Zoom, go to Settings > Video, and make sure your external webcam is picked in the Camera drop-down menu
6. **Close Other Camera Apps**-- Close any other app that might be using your camera (like Teams, Skype, or Google Meet), then restart Zoom.

Q4. You are helping a friend whose printer is showing 'offline' status on their PC. Describe how you would use the Windows Troubleshooter tool to try to fix the issue, and explain what information the tool provides during the process.

➤ **How to Run the Printer Trouble-shooter**

1. **Open Settings:** Click the Start menu and select the Gear icon (or press Win + I).
2. **Find Troubleshoot:** Go to System, then scroll down and click on Troubleshoot.
3. **Locate the Tool:** Click on Other trouble-shooters.
4. **Run it:** Find Printer in the list and click the Run button next to it

➤ **What the Tool Does and Explains**

While the trouble shooter is running, it acts like a digital detective. It will show a progress bar and explicitly tell you what it is checking in real-time. Here is the information it provides:

- **Checking Spooler Service:** It will state if it is verifying the Print Spooler, which is the background software managing your print jobs.
- **Network Connectivity Status:** If it is a wireless or network printer, the tool will report whether your PC can actually "see" the printer over the network.
- **Driver Validation:** It will display whether your printer drivers are corrupted, outdated, or missing.
- **Device Status:** It checks if the printer is physically turned off or disconnected from the USB port.
- **Error Summaries:** If it finds a specific issue, it will stop and give you a clear description (e.g., "Print spooler service is not running" or "Printer cannot be reached over the network").

➤ **The Final Report**

- **"Problems found":** It will list the specific issues, tell you if it fixed them automatically, or give you step-by-step instructions on how you can fix them manually.
- **"Troubleshooting couldn't identify the problem":** This means the Windows software system looks healthy, and the offline issue is likely due to a physical loose cable, a Wi-Fi disconnect, or a hardware error on the printer's actual screen.
